Serving the Precast Concrete Industry

The National Precast Concrete Association® (NPCA®) represents companies in the precast concrete industry. From manufacturers and suppliers to technology companies and service providers, our members reside in the United States, Canada and around the world. Our mission is to provide industry leadership by promoting quality precast concrete products across all markets, addressing industry challenges and developing opportunities for our members' success.

NPCA gives its members a voice in shaping the industry's direction and access to valuable resources to help their businesses thrive. Through technical support, advocacy, education, networking and business opportunities, we help move the precast concrete industry forward.

Programs & Services

WORKFORCE DEVELOPMENT

NPCA and the NPCA Foundation have funded grants at five U.S. universities to develop classes that educate students about precast concrete. They also provide access to internships, scholarships and in-person and virtual guest lectures.

EDUCATION & TRAINING

NPCA provides a wide range of education and training programs through webinars, onsite courses, an Online Learning Center and the Master Precaster® program.

THE PRECAST SHOW®

NPCA produces the industry's largest trade show, which annually draws more than 375 exhibitors and 5,000 industry professionals.

PLANT CERTIFICATION

NPCA's Accredited Plant Quality Certification Program is recognized by state and local municipalities across the U.S., including state departments of transportation in 41 states. More than 380 plants have been certified.

PRECAST DAYS

NPCA's annual event is designed to raise awareness of precast manufacturing — educating local communities about precast careers, products and modern techniques.

TECHNICAL SUPPORT

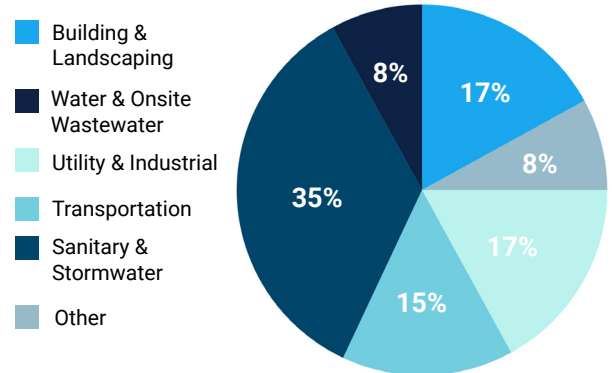

NPCA staff engineers are available to members and construction material specifiers to assist with technical guidance and resources.

Precast is the ideal construction material for projects that endure for generations.

Precast concrete is prepared, cast and cured in a controlled factory environment, using reusable molds, also called “forms.” Once cured, precast concrete manufactured products are loaded onto trailers, driven to installation sites and installed. Precast concrete is used in the construction and building sectors for infrastructure, residential and non-residential properties, and just about any other use that the imagination allows.

These sustainable, resilient and affordable products significantly reduce the time for construction, number of workers, and cost. The gradual shifting of building contractors and customers toward eco-friendly and cost-effective modern building designs has helped to fuel precast concrete market growth.

INDUSTRY SALES BY PRODUCT TYPE
