

NPCA COMMITTEES

Connect with the Precast Industry
Get Involved and Make a Difference!

NPCA committees have been a strong foundation for this association's growth for many years. There are two types of committees:

- Standing committees, created by the board to address major industry issues; and
- Product-specific committees, which address and respond to threats and/or opportunities that impact specific product lines within the manufactured concrete products industry.

All NPCA committees are populated by volunteers who are either producer members or associate members, members of academia or specifiers. Here is a snapshot of NPCA committees and their missions:

STANDING COMMITTEES

Education Committee

Develops a vision and framework for education throughout the precast industry and oversees programs and courses, including PQS and Precast University.

Quality Assurance Committee

Provides oversight and guidance in the administration of NPCA's Quality Assurance Programs. This includes approval of standards contained in the NPCA Quality Control Manual and regulations governing quality control programs.

Safety, Health & Environmental Committee

Provides guidance to enable NPCA member companies to achieve excellence in safety programs. The SHE Committee develops resources that help plants integrate safety, health and environmental practices into everyday business operations. The committee develops and distributes current safety information through the NPCA website and bi-monthly posted topics. Due to the complexities of environmental code compliance, the SHE committee has a separate standalone subcommittee devoted to these issues.

Technical and Best Practices Committee

Oversees the development of technical publications and manages the development and documentation of best practices for the design, production and installation of quality precast concrete products.

PRODUCT-SPECIFIC COMMITTEES

Manhole Products

Currently working on: Manhole products information guide, ASTM C478 updates, manhole structural design parameters research options, manhole barrel fiber reinforcement research options, LRFD design factors for precast manholes and inlets.

Precast Concrete Paving Slabs

Currently working on: Developing additional resources for precast concrete pavement users and specifiers, addressing challenges facing precasters, installers and users, maintaining project map on NPCA's website and maintaining collaboration with FHWA's Expert Task Group for Precast Concrete Pavement Implementation as its efforts evolve.

Stormwater Management

Currently working on: Stormwater blog posts and technical documents, case studies, stormwater structure maintenance document.

Utility Structures

Currently working on: Technical documents, case studies and custom product-specific pages on precast.org for various utility structures.

Wall Products

Currently working on: Retaining wall PDH course, sound wall comparison document, and education and outreach.

Water and Wastewater

Currently working on: Revising the Grease Interceptor O&M Manual, Septic Tank Brochure and Grease Interceptor Brochure, developing new language for ASTM C1227 on secondary safety devices and focusing on outreach and education to members, specifiers and regulators.

- Optional Ballot: funded tradeshow and conferences, Onsite Installer ads.

STILL UNDECIDED?

We are happy to tell you more. Simply submit your contact information to: [precast.org/committees](https://www.precast.org/committees) and we'll contact you!
