amorales@precast.org
(317) 582-2329

Visit precast.org/awards for awards criteria
and the award categories.

The NPCA Best Practices Award recognizes industry best practices and improvements that showcase the best way to do a job, treat the environment, save money ... and more. This award continues to recognize the precast industry's best sustainable practices and innovations but now also recognizes myriad safety and lean manufacturing processes that improve life, not just for the community and environment, but on the production floor, too. Best practices innovations on the production floor can have far reaching benefits for manufacturing plants, and this is an opportunity to showcase your innovations!

Entry Guidelines

Open to both Producer and Associate members, the NPCA Best Practices Award seeks to spotlight precast industry innovations that usually get lost in lean manufacturing and/or sustainability-focused awards programs. **Any industry best practice qualifies for entry.** There's no limit to what constitutes "industry best practice," but the following are some sustainability- and lean manufacturing-related categories to assist in your application.

Sustainability Categories

Human
Social
Environmental
Economic

Lean Manufacturing Categories

Eliminating Waste
Continuous Improvement
Organization
Safety

These are baseline categories only and members are encouraged to submit any industry best practice for consideration to showcase resiliency, production process innovations and more. New innovations that change plant practices, better the plant production environment or benefit the company in any way should be submitted. We want to recognize you!

Program Requirements

Any number of entries may be submitted, provided they cover a different aspect of the company or job site. Each entry must have been initiated (in the case of a practice) or completed (in the case of a project) within five years of the submittal deadline. Each entry may be submitted a maximum of two times. However, if a submittal wins a Best Practices Award upon its first entry, it is no longer eligible. You must be a member of NPCA in good standing at the time of submittal, and when the awards are announced.

ENTRY FORM

Company Name (as it should appear on an award): _____

Company Address: _____

Name of Person submitting entry: _____

Phone _____ Email: _____

Member Type: Producer Associate

Executive Summary: (250 words max)

- Problem to be addressed, if any
- Goal of implementing best practice
- Benefits seen after implementation

List the sustainable, lean or other best practice attributes of the entry:

1. _____
2. _____
3. _____
4. _____
5. _____

Description of Best Practice (750 words max):

Detail the nature of your entry, focusing on the impact of your best practice and its results.
Reference drawings or photos attached with your submission.

Entries will be evaluated per the rubric below. Entrants are encouraged to identify best practice categories in addition to sustainability and lean categories listed on the application. We have combined previous awards under the “best practice” umbrella, so the sky is the limit. What is your plant doing to make internal operations better, or reduce your environmental impact, or minimize waste, or just to make things better? The Engineering & Technology Committee’s Best Practices Task Force wants to know.

5	Extremely innovative, well documented and adoptable by others
4	Innovative, well documented and described
3	Good example of best practice; can be adopted by others
2	Good idea, but not necessarily recommended for all
1	Common practice; not necessarily innovative
0	Not applicable
