

Safety Resources

When it comes to the construction industry, safety is a critical part of the everyday work environment. Precast concrete company owners and employees need to stay vigilant at all times, and NPCA is committed to providing the resources that can help them establish a strong safety culture and maintain a safe work environment.

The Safety Committee focuses on providing guidance to NPCA member companies to achieve excellence in safety programs and acts as a catalyst for integrating safety in the precast industry. These safety resources are available for use to develop your plant-specific safety manual, educate and train plant personnel and promote a safe culture in the plant environment.

NPCA Safety Videos

Train your precast plant team members on the essentials of safety best practices with the [NPCA Safety videos](#). From equipment to production, each of the six modules focuses on a category of safety best practices and is perfect for toolbox talks or your next safety meeting.

Bi-Monthly Safety Training

The Safety Committee created a bimonthly safety training series for precasters to use for conducting safety programs at their plant. Each program consists of a PowerPoint, a copy of the program from the NPCA Guide to Plant Safety and additional materials. Each program is collected in the following Excel spreadsheet for a quick access to each program.

NPCA's Guide to Plant Safety

The NPCA Guide to Plant Safety incorporates the regulations of the Occupational Health & Safety Administration (OSHA) that affect precast concrete facilities in the United States. Each regulation is collected in the following NPCA Guide to Plant Safety zip file folder.
