

Precast Tanks Provide Complete Home Water Solution

Challenge: A rural, mountainous area in Colorado requires a septic system, fire suppression tank and potable water tank to be installed on each property with new home construction.

Solution: For one such new home, precast concrete tanks were selected for all three required structures thanks to precast's quality, durability, sustainability and long service life. The home required a 1,500-gallon septic tank, a 2,600-gallon potable water tank and a 2,600-gallon fire suppression tank. All three precast concrete tanks were delivered and installed quickly and efficiently to provide a safe and long-lasting complete home water system.

Quality-Engineered: Precast tanks are designed and engineered to the latest industry standards, use quality raw materials and are manufactured in accordance with strict QA/QC programs, providing strong and durable solutions that stand the test of time.

Affordable and Available Now: Precast tanks are available NOW in all 50 states with no waiting or backlog, at prices often more affordable than alternatives. Precast tanks provide value and peace of mind.

Resilient: Precast concrete's exceptional strength and durability enhance the longevity of each treatment system and help protect this valuable infrastructure from the effects of both natural and man-made disasters.
